### Abstract

A system for managing the delivery of goods from a distribution centre through an agent to a receiver comprises a client for providing at least a schedule information of the receiver; a distribution server for providing at least a delivery schedule information and for managing the delivery of the goods; an agent server for managing the commission on the goods by the agent; a data transmission network interconnecting said client, said agent server and said distribution server; means for determining the date and time for delivery of the goods, or for deciding the agent to be used, between said client and said distribution server; and means for noticing of store-in and/or store-out of the goods into and/or from the agent to at least one of

said distribution server and said client.
